

Problem:1

```
java = float(input("Enter the Java mark: "))
python = float(input("Enter the Python mark: "))
mysql = float(input("Enter the MySQL mark: "))

total = java + python + mysql
average = total / 3
percentage = (total / 300) * 100
remaining = 300 - total

print("Total:", total)
print("Average:", average)
print("Percentage:", percentage)
print("Remaining marks:", remaining)
```

output:

```
Enter the Java mark: 80
Enter the Python mark: 70
Enter the MySQL mark: 90
Total: 240.0
Average: 80.0
Percentage: 80.0
Remaining marks: 60.0
```
